

Biotechnology Research Services

1.

Biopharmaceutical Development Services

Assisting pharmaceutical companies in developing biologic drugs.

3.

CRISPR-Cas9 Genome Editing Services

Offering precise gene editing solutions for research purposes.

5.

Environmental Bioremediation Services

Developing solutions to clean up environmental pollutants using biological agents.

7.

Microbial Strain Improvement Services

Modifying microorganisms for enhanced bio-production or environmental applications.

9.

Biobanking and Sample Management Services

Managing biological samples for research institutions and pharmaceutical companies.

11.

Pharmacogenomics Services

Studying how genetics affect individual responses to drugs, aiding in personalized medicine.

13.

Gene Synthesis and Cloning Services

Customizing genes and cloning them for research purposes.

15.

Vaccine Development and Production Services

Researching and producing vaccines using biotechnological methods.

17.

DNA Sequencing and Genomic Analysis Services

Analyzing DNA sequences for various research applications.

19.

Cell Line Development Services

Creating stable and high-producing cell lines for research and biomanufacturing.

21.

Biological Data Mining Services

Extracting valuable patterns and knowledge from large biological datasets.

23.

Genomic Medicine Consultation Services

Providing expert guidance on applying genomics in clinical practice.

25.

Nanobiotechnology Research Services

Studying applications of nanotechnology in the field of biotechnology.

27.

Regenerative Medicine Consulting Services

Offering strategic advice on regenerative medicine approaches and technologies.

29.

Biotechnology Research Services

Biotechnology Intellectual Property (IP) Services

Assisting researchers and companies in patenting biotechnological inventions and innovations.
