

Biotechnology Contract Research Assistance

1.

Custom Antibody Production

Creating specific antibodies tailored to clients research needs.

3.

Microbial Identification Services

Identifying microorganisms for quality control in various industries.

5.

Cell Line Authentication

Validating the authenticity of cell lines used in research and development.

7.

Bioprocess Optimization

Optimizing bioproduction processes for improved yield and efficiency.

9.

Pharmacokinetics Studies

Analyzing drug behavior within biological systems for pharmaceutical companies.

11.

Viral Clearance Studies

Assessing the effectiveness of processes in removing viruses from biopharmaceutical products.

13.

Metabolomics Services

Analyzing small molecules to study metabolic pathways and disease mechanisms.

15.

Clinical Research Support

Providing biotechnological expertise and services for clinical trials.

17.

Transcriptomics Studies

Analyzing RNA sequences to understand gene expression patterns in specific conditions.

19.

Phage Display Libraries

Creating libraries for the selection of specific peptides or proteins.

21.

Protein-Protein Interaction Studies

Investigating interactions between proteins for various research applications.

23.

Clinical Genomic Testing

Offering genomic testing services for diagnosing genetic disorders and diseases.

25.

Cell Therapy Development

Assisting in the development of cell-based therapies for various medical conditions.

27.

In Vitro Diagnostics Development

Creating diagnostic assays and tests for various diseases.

29.

Biotechnology Contract Research Assistance

Molecular Imaging Services

Developing imaging agents for studying molecular processes in living organisms.
