

Biotechnology Services Section Front Page

Biotechnology harnesses cellular and biomolecular processes to develop technologies and products that help improve our lives and the health of our planet. It is used in the biological processes of microorganisms for more than 6,000 years to make useful food products, such as bread and cheese, and to preserve dairy products. Modern biotechnology provides breakthrough products and technologies to combat debilitating and rare diseases, reduce our environmental footprint, feed the hungry, use less and cleaner energy, and have safer, cleaner and more efficient industrial manufacturing processes.
