

Antibodies

At NTHRYS OPC PVT LTD, we offer a diverse selection of antibodies designed to meet various needs. Our comprehensive range includes various categories of antibodies, each serving specific applications in therapeutics, diagnostics, research, and more.

1. Therapeutic Antibodies

Our therapeutic antibodies are meticulously developed to target specific disease-associated antigens, offering promising treatment options for a wide range of medical conditions. These monoclonal antibodies (mAbs) and polyclonal antibodies are engineered to deliver precise therapeutic effects, combating diseases such as cancer, autoimmune disorders, infectious diseases, and inflammatory conditions.

2. Diagnostic Antibodies

Our diagnostic antibodies play a crucial role in accurate disease detection and monitoring. These high-quality antibodies are utilized in various diagnostic assays, including ELISA kits, immunohistochemistry, western blotting, and flow cytometry. With exceptional specificity and sensitivity, our diagnostic antibodies enable reliable and efficient detection of disease biomarkers and antigens, facilitating early diagnosis and effective patient management.

3. Research Antibodies

Unlock new insights into biological processes with our premium research antibodies. Designed for use in basic and applied research across diverse fields, our research antibodies enable scientists and researchers to investigate protein expression, localization, and interactions within cells and tissues. Whether studying cellular pathways, protein function, or disease mechanisms, our research antibodies provide invaluable tools for advancing scientific knowledge and innovation.

4. Theranostic Antibodies

Experience the dual benefits of therapy and diagnostics with our innovative theranostic antibodies. These multifunctional antibodies combine therapeutic properties with diagnostic capabilities, offering personalized treatment options and real-time monitoring of treatment efficacy. By integrating therapeutic and diagnostic elements, our theranostic antibodies pave the way for precision medicine approaches, optimizing patient outcomes and enhancing clinical decision-making.

5. Biosimilar Antibodies

Access cost-effective alternatives to branded therapeutic antibodies with our biosimilar antibody offerings. Our biosimilar antibodies are highly similar to approved reference antibodies, providing comparable efficacy, safety, and quality at reduced costs. By expanding access to essential biologic therapies, our biosimilar antibodies address unmet medical needs and contribute to improved healthcare affordability and accessibility worldwide.
