

## Molecular Neurobiology PhD Research Assistance by NTHRYS

PhD in Molecular Neurobiology studies molecular and cellular underpinnings of nervous system development, synaptic signalling, plasticity and neurodegeneration. This doctoral program highlights ion channels, receptors, neurotransmitter systems, synaptic vesicle cycling, growth cones, neural circuits, omics profiling, imaging and disease models for epilepsy, neurodegeneration and psychiatric disorders. Doctoral candidates integrate molecular neuroscience with systems level readouts, publish neurobiology research and contribute to identifying targets and pathways for novel neurological therapies.
